## Lab Program 9

```java
import java.util.Scanner;
class College extends Thread {
    int time;
    String str;
    College (int t, String s) {
        time = t;
        str = s;
    }

    public void run () {
        try {
            int i=0;
            while (i< 5) {
                System.out.println (str);
                sleep(time);
                i++;
            }
        } catch (Exception e) {
        }
    }
}
class MultithreadDemo {
    public static void main (String args[]) {
        College t1 = new College (10000, "BMS College
                                    of Engineering");
        College t2 = new College (2000, "CSE");
        t1.start();
        t2.start();
    }
}
```
